PROFESSIONAL SUMMARY

AWS Certified Solutions Architect & Lead Infrastructure Engineer with a career built on the intersection of cloud-native architecture and full-stack development. Currently spearheading platform stability and the complete API lifecycle for Fagi Errands, where I manage a multi-app ecosystem with 24/7/365 operational vigilance. My background spans from building high-performance web applications with React and Node.js to orchestrating secure, scalable cloud infrastructure using Terraform and AWS CodePipeline. With a deep foundation in Computer Science and Data Science principles, I specialize in bridging the gap between robust backend engineering and secure, automated deployments. I am a proactive problem-solver dedicated to nightly security hardening, database optimization, and delivering zero-downtime solutions for complex business challenges.

EXPERIENCE

Fagi Errands Services Limited

Lead Infrastructure Engineer | Jan 2026 – Present

- Full Platform Ownership: Directly manage the stability and seamless intercommunication of four standalone interfaces, including customer and rider mobile apps, via a unified Python-based API layer.
- API Lifecycle & Versioning: Build and maintain system APIs with weekly updates every Saturday, ensuring zero breaking changes and full backward compatibility for users on older app versions.
- Daily Mobile Deployment: Execute a nightly 00:00–03:00 deployment window for Google Play and Apple App Store updates to maintain peak app store ranking and platform stability.
- Nightly Security Hardening: Operationalize DAST/SAST findings into daily production pushes, including CVE patching, WAF updates, and strict IAM policy enforcement before any release.
- Database & Observability: Administer PostgreSQL and MySQL environments, utilizing complex log analysis and Grafana/Prometheus dashboards to monitor API latency and system health 24/7.

BlueTechnology

Cloud-Full Stack Developer Aug 2025 – Jan 2026

- Serverless Architecture: Architected an e-commerce platform using AWS Lambda and API Gateway with a React frontend.
- DevOps Automation: Reduced release times by 30% by automating CI/CD pipelines and containerization using Docker and AWS CodePipeline.
- Infrastructure as Code: Managed scalable EC2, RDS, and S3 environments using CloudFormation while boosting reliability through Jest and Cypress automated testing.

FlavorFind

Mobile App Developer (AI Integration) 2025

- AI-Powered App Development: Engineered a mobile application using React Native, Spoonacular, and OpenAI APIs to provide personalized recipe generation and reduce food waste by 20%.
- Data Pipeline Engineering: Designed and implemented scalable data pipelines to structure ingredient and recipe data for efficient AI model consumption.
- Optimization: Applied data operations expertise to optimize training datasets, directly enhancing the accuracy of AI-driven recommendations within the app.

Open Data Annotation

AI Data Operations Specialist Nov 2025 – Jan 2026

Dataset Curation: Annotated multimodal datasets for computer vision and ML training using industry-standard tools like Labelbox and CVAT.

Quality Assurance: Refined annotation guidelines and optimized QA workflows, resulting in a 15% improvement in dataset accuracy for model training.

EDUCATION

The Presbyterian University of East Africa | 2022– 2026 (Expected)

Bachelor of Science in Computer Science

- Focus: Software Engineering, System Design, and Core Computing Principles.
- Technical Depth: Advanced Software Testing (Manual & Automated), Data Annotation, and Full-Stack Backend Development with Node.js and Express.

AWS Solutions Architect – Associate

- Cloud Architecture: Mastery in Scalable Design, Cost Optimization, and AWS Core Service Migration.
- Infrastructure & Security: Specialized in IAM & Security, Automation Scripting, and System Administration.
- DevOps: Implementation of CI/CD Pipelines, Infrastructure as Code (IaC), and Containerization.

Front-End Development & Full-Stack Integration

- Modern Web Stack: Proficient in React, Next.js, and Vue.js for responsive UI/UX.
- API & Backend: Design and integration of REST/GraphQL APIs using Python (Django/Flask) and Node.js.
- Database Management: Skilled in both SQL and NoSQL architectural patterns

Professional Foundations & Leadership

- Core Competencies: Agile Project Collaboration, Stakeholder Communication, and Systematic Troubleshooting.

TECHNICAL SKILLS

Cloud & Infrastructure Engineering

- AWS Mastery: Core & Serverless (EC2, S3, Lambda, RDS, IAM, Amplify, DynamoDB).
- Infrastructure as Code (IaC): CloudFormation, Terraform, and AWS CDK.
- DevOps & CI/CD: Automation via GitHub Actions, Jenkins, and AWS CodePipeline.
- Containerization: Expert in Docker, Kubernetes, and ECS/EKS orchestration.
- Observability: Advanced monitoring with CloudWatch, Prometheus, and Grafana.

App & Full-Stack Development

- Mobile & Web Frameworks: React Native, Flutter, React.js, Next.js, and Vue.js.
- Backend & APIs: Node.js, Express, Python (Django, Flask, FastAPI), and NestJS.
- API Design: REST, GraphQL, WebSocket, and Serverless Functions with OpenAPI/Swagger.
- State Management & Testing: Redux, Zustand, Jest, Cypress, and React Testing Library.

AI, Data & Databases

- AI Integration: TensorFlow.js, OpenAI API, LangChain, and multimodal dataset curation.
- Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, and Redis (Performance Tuning & Replication).
- Data Ops: Image/Video annotation, ML training data optimization, and log analysis.

LANGUAGES

- English
- swahili
